Simulation for bulk metal forming

CPM GmbH introduce **Version 7.6** of the simulation system *easy-form*. The system is well proved in industrial application and is in use with customers in Europe, South America and Asia.

The system is available as add-on to *easy-2-form*.

easy-form is a 3D simulation package for bulk metal forming. It simulates cold-warm- and hot-forging operations. *easy-form* is a fully integrated system with a simple to handle user interface ment to be used by the normal industrial engineer not being specially trained in FEA.

The system runs on PC in Windows.

The system addresses all industries and research labs dealing with metal forming and can be used for complex process analysis and optimisation as well as for the daily process design work.
